

Results from the Kentucky Core Content for Assessment Survey

What do the results say?

The tabulated results on the following charts represent feedback from approximately 6000 participants between February 8 and March 29, 2005.

The first chart is a summary of the number of individuals responding to the survey by content and grade level. The second chart is a break down of how participants at each grade level and content area reacted to questions about the feasibility of the refined core content (is it too much to expect teachers to teach?) and whether or not KDE eliminated or left out any important content from the refined standards.

Staff also had access to data on feedback provided by participants on each individual content standard.

How were the results incorporated into the refined Core Content for Assessment?

Content teams used the results from the survey standards along with national standards, research for the discipline and national reports to make adjustments to the clarity and focus of the Core Content standards. Specific feedback provided by participants on how to clarify and focus the content standards proved to be very helpful. Teams paid close attention to those standards that received substantial feedback from the field as to their need for better clarity, focus and level of rigor.

From Core Content Survey 2005	Primary	Fourth Grade	Fifth Grade	Sixth Grade	Seventh Grade	Eighth Grade	High School	Total from Entries
AH	115	37	331	24	25	178	216	926
